

112TH CONGRESS  
1ST SESSION

# S. 99

To promote the production of molybdenum-99 in the United States for medical isotope production, and to condition and phase out the export of highly enriched uranium for the production of medical isotopes.

---

## IN THE SENATE OF THE UNITED STATES

JANUARY 25 (legislative day, JANUARY 5), 2011

Mr. BINGAMAN (for himself and Ms. MURKOWSKI) introduced the following bill; which was read twice and referred to the Committee on Energy and Natural Resources

---

## A BILL

To promote the production of molybdenum-99 in the United States for medical isotope production, and to condition and phase out the export of highly enriched uranium for the production of medical isotopes.

1 *Be it enacted by the Senate and House of Representa-*  
2 *tives of the United States of America in Congress assembled,*

3 **SECTION 1. SHORT TITLE.**

4 This Act may be cited as the “American Medical Iso-  
5 topes Production Act of 2011”.

6 **SEC. 2. IMPROVING THE RELIABILITY OF DOMESTIC MED-**  
7 **ICAL ISOTOPE SUPPLY.**

8 (a) **MEDICAL ISOTOPE DEVELOPMENT PROJECTS.—**

1           (1) IN GENERAL.—The Secretary of Energy  
2 shall establish a technology-neutral program—

3           (A) to evaluate and support projects for  
4 the production in the United States, without  
5 the use of highly enriched uranium, of signifi-  
6 cant quantities of molybdenum-99 for medical  
7 uses;

8           (B) to be carried out in cooperation with  
9 non-Federal entities; and

10          (C) the costs of which shall be shared in  
11 accordance with section 988 of the Energy Pol-  
12 icy Act of 2005 (42 U.S.C. 16352).

13          (2) CRITERIA.—Projects shall be judged against  
14 the following primary criteria:

15          (A) The length of time necessary for the  
16 proposed project to begin production of molyb-  
17 denum-99 for medical uses within the United  
18 States.

19          (B) The capability of the proposed project  
20 to produce a significant percentage of United  
21 States demand for molybdenum-99 for medical  
22 uses.

23          (C) The cost of the proposed project.

24          (3) EXEMPTION.—An existing reactor fueled  
25 with highly enriched uranium shall not be disquali-

1       fied from the program if the Secretary of Energy de-  
2       termines that—

3               (A) there is no alternative nuclear reactor  
4       fuel, enriched in the isotope U-235 to less than  
5       20 percent, that can be used in that reactor;

6               (B) the reactor operator has provided as-  
7       surances that, whenever an alternative nuclear  
8       reactor fuel, enriched in the isotope U-235 to  
9       less than 20 percent, can be used in that reac-  
10      tor, it will use that alternative in lieu of highly  
11      enriched uranium; and

12              (C) the reactor operator has provided a  
13      current report on the status of its efforts to  
14      convert the reactor to an alternative nuclear re-  
15      actor fuel enriched in the isotope U-235 to less  
16      than 20 percent, and an anticipated schedule  
17      for completion of conversion.

18              (4) PUBLIC PARTICIPATION AND REVIEW.—The  
19      Secretary of Energy shall—

20              (A) develop a program plan and annually  
21      update the program plan through public work-  
22      shops; and

23              (B) use the Nuclear Science Advisory  
24      Committee to conduct annual reviews of the  
25      progress made in achieving the program goals.

1           (5) AUTHORIZATION OF APPROPRIATIONS.—

2           There are authorized to be appropriated to the Sec-  
3           retary of Energy for carrying out the program under  
4           paragraph (1) \$143,000,000 for the period encom-  
5           passing fiscal years 2011 through 2014.

6           (b) DEVELOPMENT ASSISTANCE.—The Secretary of  
7           Energy shall establish a program to provide assistance  
8           for—

9           (1) the development of fuels, targets, and proc-  
10          esses for domestic molybdenum-99 production that  
11          do not use highly enriched uranium; and

12          (2) commercial operations using the fuels, tar-  
13          gets, and processes described in paragraph (1).

14          (c) URANIUM LEASE AND TAKE BACK.—The Sec-  
15          retary of Energy shall establish a program to make low  
16          enriched uranium available, through lease contracts, for  
17          irradiation for the production of molybdenum-99 for med-  
18          ical uses. The lease contracts shall provide for the Sec-  
19          retary to retain responsibility for the final disposition of  
20          radioactive waste created by the irradiation, processing,  
21          or purification of leased uranium. The lease contracts  
22          shall also provide for compensation in cash amounts equiv-  
23          alent to prevailing market rates for the sale of comparable  
24          uranium products and for compensation in cash amounts  
25          equivalent to the net present value of the cost to the Fed-

1 eral Government for the final disposition of such radio-  
2 active waste, provided that the discount rate used to deter-  
3 mine the net present value of such costs shall be no great-  
4 er than the average interest rate on marketable Treasury  
5 securities. The Secretary shall not barter or otherwise sell  
6 or transfer uranium in any form in exchange for services  
7 related to final disposition of the radioactive waste from  
8 such leased uranium.

9 **SEC. 3. EXPORTS.**

10 Section 134 of the Atomic Energy Act of 1954 (42  
11 U.S.C. 2160d) is amended by striking subsections b. and  
12 c. and inserting in lieu thereof the following:

13 “b. Effective 7 years after the date of enactment of  
14 the American Medical Isotopes Production Act of 2011,  
15 the Commission may not issue a license for the export of  
16 highly enriched uranium from the United States for the  
17 purposes of medical isotope production.

18 “c. The period referred to in subsection b. may be  
19 extended for no more than 6 years if, no earlier than 6  
20 years after the date of enactment of the American Medical  
21 Isotopes Production Act of 2011, the Secretary of Energy  
22 certifies to the Committee on Energy and Commerce of  
23 the House of Representatives and the Committee on En-  
24 ergy and Natural Resources of the Senate that—

1           “(1) there is insufficient global supply of molyb-  
2           denum-99 produced without the use of highly en-  
3           riched uranium available to satisfy the domestic  
4           United States market; and

5           “(2) the export of United States-origin highly  
6           enriched uranium for the purposes of medical iso-  
7           tope production is the most effective temporary  
8           means to increase the supply of molybdenum-99 to  
9           the domestic United States market.

10          “d. To ensure public review and comment, the devel-  
11          opment of the certification described in subsection c. shall  
12          be carried out through announcement in the Federal Reg-  
13          ister.

14          “e. At any time after the restriction of export licenses  
15          provided for in subsection b. becomes effective, if there  
16          is a critical shortage in the supply of molybdenum-99  
17          available to satisfy the domestic United States medical iso-  
18          tope needs, the restriction of export licenses may be sus-  
19          pended for a period of no more than 12 months, if—

20                 “(1) the Secretary of Energy certifies to the  
21                 Congress that the export of United States-origin  
22                 highly enriched uranium for the purposes of medical  
23                 isotope production is the only effective temporary  
24                 means to increase the supply of molybdenum-99 nec-

1        essary to meet United States medical isotope needs  
2        during that period; and

3               “(2) the Congress enacts a Joint Resolution ap-  
4        proving the temporary suspension of the restriction  
5        of export licenses.

6        “f. As used in this section—

7               “(1) the term ‘alternative nuclear reactor fuel  
8        or target’ means a nuclear reactor fuel or target  
9        which is enriched to less than 20 percent in the iso-  
10       tope U-235;

11              “(2) the term ‘highly enriched uranium’ means  
12        uranium enriched to 20 percent or more in the iso-  
13        tope U-235;

14              “(3) a fuel or target ‘can be used’ in a nuclear  
15        research or test reactor if—

16                   “(A) the fuel or target has been qualified  
17                   by the Reduced Enrichment Research and Test  
18                   Reactor Program of the Department of Energy;  
19                   and

20                   “(B) use of the fuel or target will permit  
21                   the large majority of ongoing and planned ex-  
22                   periments and isotope production to be con-  
23                   ducted in the reactor without a large percentage  
24                   increase in the total cost of operating the reac-  
25                   tor; and

1           “(4) the term ‘medical isotope’ includes molyb-  
2           denum-99, iodine-131, xenon-133, and other radio-  
3           active materials used to produce a radiopharma-  
4           ceutical for diagnostic, therapeutic procedures or for  
5           research and development.”.

6 **SEC. 4. REPORT ON DISPOSITION OF EXPORTS.**

7           Not later than 1 year after the date of the enactment  
8           of this Act, the Chairman of the Nuclear Regulatory Com-  
9           mission, after consulting with other relevant agencies,  
10          shall submit to the Congress a report detailing the current  
11          disposition of previous United States exports of highly en-  
12          riched uranium, including—

- 13                 (1) their location;
- 14                 (2) whether they are irradiated;
- 15                 (3) whether they have been used for the pur-  
16          pose stated in their export license;
- 17                 (4) whether they have been used for an alter-  
18          native purpose and, if so, whether such alternative  
19          purpose has been explicitly approved by the Commis-  
20          sion;
- 21                 (5) the year of export, and reimportation, if ap-  
22          plicable;
- 23                 (6) their current physical and chemical forms;
- 24          and

1           (7) whether they are being stored in a manner  
2           which adequately protects against theft and unau-  
3           thorized access.

4 **SEC. 5. DOMESTIC MEDICAL ISOTOPE PRODUCTION.**

5           (a) IN GENERAL.—Chapter 10 of the Atomic Energy  
6 Act of 1954 (42 U.S.C. 2131 et seq.) is amended by add-  
7 ing at the end the following new section:

8           “SEC. 112. DOMESTIC MEDICAL ISOTOPE PRODUC-  
9 TION.— a. The Commission may issue a license, or grant  
10 an amendment to an existing license, for the use in the  
11 United States of highly enriched uranium as a target for  
12 medical isotope production in a nuclear reactor, only if,  
13 in addition to any other requirement of this Act—

14           “(1) the Commission determines that—

15           “(A) there is no alternative medical isotope  
16           production target, enriched in the isotope U-  
17           235 to less than 20 percent, that can be used  
18           in that reactor; and

19           “(B) the proposed recipient of the medical  
20           isotope production target has provided assur-  
21           ances that, whenever an alternative medical iso-  
22           tope production target can be used in that reac-  
23           tor, it will use that alternative in lieu of highly  
24           enriched uranium; and

1           “(2) the Secretary of Energy has certified that  
2 the United States Government is actively supporting  
3 the development of an alternative medical isotope  
4 production target that can be used in that reactor.

5           “b. As used in this section—

6           “(1) the term ‘alternative medical isotope pro-  
7 duction target’ means a nuclear reactor target which  
8 is enriched to less than 20 percent of the isotope U-  
9 235;

10           “(2) a target ‘can be used’ in a nuclear re-  
11 search or test reactor if—

12           “(A) the target has been qualified by the  
13 Reduced Enrichment Research and Test Reac-  
14 tor Program of the Department of Energy; and

15           “(B) use of the target will permit the large  
16 majority of ongoing and planned experiments  
17 and isotope production to be conducted in the  
18 reactor without a large percentage increase in  
19 the total cost of operating the reactor;

20           “(3) the term ‘highly enriched uranium’ means  
21 uranium enriched to 20 percent or more in the iso-  
22 tope U-235; and

23           “(4) the term ‘medical isotope’ includes molyb-  
24 denum-99, iodine-131, xenon-133, and other radio-  
25 active materials used to produce a radiopharma-

1 ceutical for diagnostic, therapeutic procedures or for  
2 research and development.”.

3 (b) TABLE OF CONTENTS.—The table of contents for  
4 the Atomic Energy Act of 1954 is amended by inserting  
5 the following new item at the end of the items relating  
6 to chapter 10 of title I:

“Sec. 112. Domestic medical isotope production.”.

7 **SEC. 6. ANNUAL DEPARTMENT OF ENERGY REPORTS.**

8 The Secretary of Energy shall report to Congress no  
9 later than one year after the date of enactment of this  
10 Act, and annually thereafter for 5 years, on Department  
11 of Energy actions to support the production in the United  
12 States, without the use of highly enriched uranium, of mo-  
13 lybdenum-99 for medical uses. These reports shall include  
14 the following:

15 (1) For medical isotope development projects—

16 (A) the names of any recipients of Depart-  
17 ment of Energy support under section 2 of this  
18 Act;

19 (B) the amount of Department of Energy  
20 funding committed to each project;

21 (C) the milestones expected to be reached  
22 for each project during the year for which sup-  
23 port is provided;

1 (D) how each project is expected to sup-  
2 port the increased production of molybdenum-  
3 99 for medical uses;

4 (E) the findings of the evaluation of  
5 projects under section 2(a)(2) of this Act; and

6 (F) the ultimate use of any Department of  
7 Energy funds used to support projects under  
8 section 2 of this Act.

9 (2) A description of actions taken in the pre-  
10 vious year by the Secretary of Energy to ensure the  
11 safe disposition of radioactive waste from used mo-  
12 lybdenum-99 targets.

13 **SEC. 7. NATIONAL ACADEMY OF SCIENCES REPORT.**

14 The Secretary of Energy shall enter into an arrange-  
15 ment with the National Academy of Sciences to conduct  
16 a study of the state of molybdenum-99 production and uti-  
17 lization, to be provided to the Congress not later than 5  
18 years after the date of enactment of this Act. This report  
19 shall include the following:

20 (1) For molybdenum-99 production—

21 (A) a list of all facilities in the world pro-  
22 ducing molybdenum-99 for medical uses, includ-  
23 ing an indication of whether these facilities use  
24 highly enriched uranium in any way;

1 (B) a review of international production of  
2 molybdenum-99 over the previous 5 years, in-  
3 cluding—

4 (i) whether any new production was  
5 brought online;

6 (ii) whether any facilities halted pro-  
7 duction unexpectedly; and

8 (iii) whether any facilities used for  
9 production were decommissioned or other-  
10 wise permanently removed from service;  
11 and

12 (C) an assessment of progress made in the  
13 previous 5 years toward establishing domestic  
14 production of molybdenum-99 for medical uses,  
15 including the extent to which other medical iso-  
16 topes that have been produced with molyb-  
17 denum-99, such as iodine-131 and xenon-133,  
18 are being used for medical purposes.

19 (2) An assessment of the progress made by the  
20 Department of Energy and others to eliminate all  
21 worldwide use of highly enriched uranium in reactor  
22 fuel, reactor targets, and medical isotope production  
23 facilities.

24 **SEC. 8. DEFINITIONS.**

25 In this Act the following definitions apply:

1           (1) HIGHLY ENRICHED URANIUM.—The term  
2           “highly enriched uranium” means uranium enriched  
3           to 20 percent or greater in the isotope U-235.

4           (2) LOW ENRICHED URANIUM.—The term “low  
5           enriched uranium” means uranium enriched to less  
6           than 20 percent in the isotope U-235.

7 **SEC. 9. BUDGETARY EFFECTS.**

8           The budgetary effects of this Act, for the purpose of  
9           complying with the Statutory Pay-As-You-Go Act of 2010,  
10          shall be determined by reference to the latest statement  
11          titled “Budgetary Effects of PAYGO Legislation” for this  
12          Act, submitted for printing in the Congressional Record  
13          by the Chairman of the Senate Budget Committee, pro-  
14          vided that such statement has been submitted prior to the  
15          vote on passage.

○
